CEILING CATALOGUE No. 350

\$3.00

This copy of our 1909 catalogue, showing the "Hi-Art" line offered years ago by The W. F. Norman Sheet Metal Mfg. Co., may be used to select the styles and designs desired today. Except for a few items, the complete Norman steel ceiling line is available again.

Note that nails, furring strips and blue prints mentioned on page 3 are not provided now. One wood bracket will be provided, however, with each section of molding or cornice.

Panels and plates may be used in ceiling design, on wall, around fireplaces, or in many other ways. Cornices may be used separately, too.

Prices available upon request.

## *INTRODUCTION.*

**T**HIS EDITION of our Steel Ceiling Catalogue, showing "High Art" Steel Ceilings, illustrates the very latest designs, and will convey a good idea of our capabilities for manufacturing this class of ornamental and useful building material.

On the following pages we show Greek, Empire, Rococo, Colonial and Oriental, as well as modern styles of architecture. Being the pioneer manufacturers of Steel Ceilings in the West, and with a knowledge of the business extending over a period of many years, we solicit your patronage. Our location will be of advantage to our Western customers in getting Steel Ceilings promptly. We offer you nothing but first-class goods at reasonable prices. We are constantly adding new designs. We are in an age of progress and since our last Catalogue was issued have made great changes in the equipment of our factory, in the addition of the latest and most improved machinery, and are producing the work in a most perfect and economical manner. All prices quoted in Catalogue are based on the cost of producing the designs, and are subject to a discount to the trade. The simple construction we show, making the best joint possible, will appeal to architects, builders and others.

Our motto: "Good Goods, Reasonable Prices, Prompt Shipments."

THE W. F. NORMAN SHEET METAL MFG. CO.,  
NEVADA, MISSOURI.

# INSTRUCTIONS FOR APPLYING *Hi-Art* STEEL CEILINGS.

## FURRING FOR FLAT-BACK PLATES.

**S**TRIKE chalk line through center of room lengthwise, then strike lines 6-inch centers so that they are parallel with the center lines of the nailing beads on the plates, as shown in blue print. On these lines nail  $\frac{1}{2}$  x  $\frac{1}{2}$ -inch furring strips. Nail strips in angle of ceiling at wall and at a distance from the wall equal to the projection of the cornice to receive the cornice brackets. One wood bracket is furnished with each section of molding or cove. Bring the strips to a uniform depths by driving wedges between the strips and the old ceiling or joists; otherwise the ceiling will present an uneven appearance when completed. Begin applying ceiling at one end of room in center, placing plates as shown by blue print, working both ways to side wall. The field should be applied first, then the Cornice, and finally the Mold, Border or Filler, as the case may be. Close or "swedge" with a small dull tool any joints which may not have been lapped tightly, owing to the lapping heads having been bent or flattened in applying. It is well to nail two or three nails to the plate when starting so they can be drawn in case Ceiling is not started straight. Flat-back plates may be applied to sheathing, in which case no furring strips will be required, but the sheathing should be level.

## FURRING FOR PANELS DEEPER THAN $\frac{1}{8}$ INCH.

Nail furring strips the length of the room, as for flat plates, carefully leveling them with wedges. Then nail other strips at right angles on top of these, at distances from center to center equal to the distances between centers of the nailing heads of the panels, as shown on the blue print. Nail "headers" or cross strips at right angles to the last strips and on top of the first strips applied. This will bring all strips to the same level. To bring the cornice to the level of the ceiling, nail one strip on top of another in the angle between the ceiling and the wall and at a distance from the wall equal to the projection of the cornice.

DOUBLE OR CROSS FURRING.

## BEVEL FURRING STRIPS

This strip is intended to be used with plates that are rigid enough to admit of nailing around the edges only. These strips are not unlike an O.G. batten. Where they are to be used with a plate 2 feet by 4 feet in size, apply these strips as follows: Begin nailing the strips 2 feet from center to center across the joists, then saw the cross strip on a level at each end so it will fit between and down on the long strips, spacing them 4 feet centers for plates 2 feet by 4 feet; and for plates 2 feet by 2 feet space 2 feet centers. The strips are used wherever there is a white line on the blueprint, except we usually send strips  $\frac{3}{8}$  inch by  $\frac{3}{8}$  inch to be used around the outside edges of ceiling under the Filler, Molding and Cove.
